The Richard Hanson Symposium

Financial support made possible by.

Case Western Reserve University School of Medicine
Dr. Richard W. Hanson is a distinguished scholar and educator. He has made significant contributions to the field of molecular biology, particularly in the area of RNA metabolism and the regulation of gene expression. His research has been pivotal in advancing our understanding of how RNA molecules are processed and how they influence gene activity.

In 1978, Dr. Hanson came to Case Western Reserve University to join the Department of Biochemistry at the University School of Medicine, where he has been a faculty member ever since. He has founded and led a number of laboratories that have focused on the study of RNA metabolism and the regulation of gene expression. His work has been recognized with numerous awards and honors, including the Richard W. Hanson Award from the American Society of Biochemistry and Molecular Biology.

Dr. Hanson has published extensively in the field of molecular biology, with contributions to over 200 scientific articles. He has also mentored numerous students and researchers, many of whom have gone on to successful careers in academia and industry. His dedication to teaching and mentoring has been a significant part of his legacy, and he continues to inspire and guide the next generation of scientists.

Dr. Hanson has also been actively involved in the scientific community, serving on the boards of several prestigious organizations and contributing to their mission. His contributions have been recognized with his election as a Fellow of the American Academy of Arts and Sciences, among other honors.

In recognition of his contributions to the field of molecular biology, the American Institute of Biological Sciences has awarded him the Distinguished Service Award for his leadership and commitment to advancing scientific knowledge.

Dr. Hanson's work has had a profound impact on the field of molecular biology, and his contributions continue to influence research and education in this important area. His legacy will be remembered for generations to come.
Dr. Herbert Tabor is editor-in-chief of the Journal of Biological Chemistry. He served as a member of the National Academy of Sciences. His work has been recognized by various awards, including the American Chemical Society's Award for Research in Biotechnology. He is also a member of the National Academy of Sciences and the Institute of Medicine.

Dr. Tabor has made significant contributions to the fields of biochemistry and molecular biology. His research has focused on the structure and function of proteins, and he has made important contributions to the understanding of the mechanisms of protein folding and degradation.

Over his career, Dr. Tabor has published over 200 research papers and has been awarded numerous grants and honors. He has also served as a consultant to several companies and organizations, including the National Institutes of Health and the National Science Foundation.

Dr. Tabor received his Ph.D. in biochemistry from Temple University, and he is a member of the American Chemical Society and the American Society for Biochemistry and Molecular Biology.
Richard W. Hanson, Ph.D. 

Honor a Beloved Teacher
